Islands of Abandonment: Nature Rebounding in the Post Human Landscape Cal Flyn 3 copies in LPL	Cal Flyn, an investigative journalist, exceptional nature writer, and promising new literary voice visits the eeriest and most desolate places on Earth that due to war, disaster, disease, or economic decay, have been abandoned by humans. What she finds every time is an "island" of teeming new life: nature has rushed in to fill the void faster and more thoroughly than even the most hopeful projections of scientists. Islands of Abandonment is a tour through these new ecosystems, in all their glory, as sites of unexpected environmental significance, where the natural world has reasserted its wild power and promise. And while it doesn't let us off the hook for addressing environmental degradation and climate change, it is a case that hope is far from lost, and it is ultimately a story of redemption: the most polluted spots on Earth can be rehabilitated through ecological processes and, in fact, they already are.	384
All the Living and the Dead Hayley Campbell 4 copies in LPL	We are surrounded by death. It is in our news, our nursery rhymes, our true-crime podcasts. Yet from a young age, we are told that death is something to be feared. How are we supposed to know what we're so afraid of, when we are never given the chance to look? Fueled by a childhood fascination with death, journalist Hayley Campbell searches for answers in the people who make a living by working with the dead. Along the way, she encounters mass fatality investigators, embalmers, and a former executioner who is responsible for ending sixty-two lives. She meets gravediggers who have already dug their own graves, visits a cryonics facility in Michigan, goes for late-night Chinese with a homicide detective, and questions a man whose job it is to make crime scenes disappear. Through Campbell's incisive and candid interviews with these people who see death every day, she asks: Why would someone choose this kind of life? Does it change you as a person? And are we missing something vital by letting death remain hidden? A dazzling work of cultural criticism, <i>All the Living and the Dead</i> weaves together reportage with memoir, history, and philosophy, to offer readers a fascinating look into the psychology of Western death.	288

Ultra Processed People:	It's not you, it's the food. We have entered a new age of eating. For the first time in human	304
Why We Can't Stop	history, most of our calories come from an entirely novel set of substances called Ultra-	
Eating Food That Isn't	Processed Food. There's a long, formal scientific definition, but it can be boiled down to	
Food	this: if it's wrapped in plastic and has at least one ingredient that you wouldn't find in your	
Chris Van Tulleken	kitchen, it's in this book, Chris van Tulleken, father, scientist, doctor, and award-winning	
17 copies in LPL	BBC broadcaster, marshals the latest evidence to show how governments, scientists, and	
	doctors have allowed transnational food companies to create a pandemic of diet-related	
	disease. The solutions don't lie in willpower, personal responsibility, or exercise. You'll find	
	no diet plan in this book—but join Chris as he undertakes a powerful self-experiment that	
	made headlines around the world: under the supervision of colleagues at University	
	College London he spent a month eating a diet of 80 percent UPF, typical for many children	
	and adults in the United States. While his body became the subject of scientific scrutiny, he	
	spoke to the world's leading experts from academia, agriculture, and—most important—	
	the food industry itself. But more than teaching him about the experience of the food, the	
	diet switched off Chris's own addiction to UPF	
Money: The	What is money, and how does it work? In this tour de force of political, cultural, and	336
Unauthorized Biography:	economic history, Felix Martin challenges nothing less than our conventional	
from Coinage to	understanding of one of humankind's greatest inventions. Martin describes how the	
Cryptocurrency	Western idea of money emerged in the ancient world, and was shaped over the centuries	
Felix Martin	by tensions between sovereigns and the emerging middle classes. Money, he argues, has	
2 copies in LPL	always been an intensely political instrument, and that it is our failure to remember this	
	that led to the crisis in our financial system and the Great Recession. He concludes with	
	practical solutions for making money serve us—and, in an introduction and epilogue new	
	to this edition, a discussion of what Bitcoin and other cryptocurrencies mean for money's	
	future. From John Locke to Montesquieu, from Sparta to the Soviet Union, <i>Money</i> is a far-	
	ranging and magisterial work of history and economics, with profound implications for the	
	world today.	
The Big Fix: How	Beyond the obvious examples of airlines, telcos, grocery chains, and banks, <i>The Big Fix:</i>	120
Companies Capture	How Companies Capture Markets and Harm Canadians shows how corporate	
Markets and Harm	concentration is growing across many industries, leading to higher prices for consumers,	
Canadians	lower worker's wages, more inequality, fewer startups, less innovation, and lower growth	
Denise Hearn and Vass	and productivity.	
Bednar		
0 copies in LPL		

	In this galvanizing book, Hearn and Bednar show how companies perpetuate the illusion of rivalry to disguise their dominance, and how they've shifted from competing within industries to accumulating assets across industries, further entrenching their power. The authors coach readers on how to think about competition, how markets are made and remade, and how the right set of attitudes and policies reduce corporate power and rebalance it throughout the economy. The future of Canada's economy is up for grabs, and <i>The Big Fix</i> shows how the country can achieve a more innovative, productive, and livable economy for all Canadians.	
The Deepest Map: The High Stakes Race to Chart the World's Oceans Laura Trethewey 3 copies in LPL	Five oceans cover approximately seventy per cent of the earth, yet we know little of what lies beneath them. Now, the race is on to completely map the oceans' floor. Scientists, investors, militaries, and private explorers are competing in this epic venture to obtain an accurate reading of this vast terrain and understand its contours and environment. In <i>The Deepest Map</i> , Laura Trethewey chronicles this race to the bottom. Following global efforts around the world, she documents Inuit-led crowdsourced mapping in the Arctic as climate change alters the landscape, a Texas millionaire's efforts to become the first man to dive to the deepest point in each ocean, and the increasingly fraught question of whether and how to mine the deep sea. A true tale of science, nature, technology, and extreme outdoor adventure, <i>The Deepest Map</i> both illuminates why we love — and fear — the earth's final frontier and contributes to increasingly urgent conversations about climate change.	336
The Age of Insecurity: Coming Together as Things Fall Apart Astra Taylor 5 copies in LPL	These days, everyone feels insecure. We are financially stressed and emotionally overwhelmed. The status quo isn't working for anyone, even those who appear to have it all. What is going on? In this urgent cultural diagnosis, author and activist Astra Taylor exposes how seemingly disparate crises—rising inequality and declining mental health, the ecological emergency, and the threat of authoritarianism—originate from a social order built on insecurity. From home ownership and education to the wellness industry and policing, many of the institutions and systems that promise to make us more secure actually undermine us. Mixing social critique, memoir, history, political analysis, and philosophy, this genre-bending book rethinks both insecurity and security from the ground up. By facing our existential insecurity and embracing our vulnerability, Taylor argues, we can begin to develop more caring, inclusive, and sustainable forms of security to help us	352

	better weather the challenges ahead. <i>The Age of Insecurity</i> will transform how you understand yourself and society—while illuminating a path toward meaningful change.	
The Wake: The Deadly Legacy of a Newfoundland Tsunami Linden MacIntyre 10 copies in LPL	On November 18, 1929, a tsunami struck Newfoundland's Burin Peninsula. Giant waves up to three storeys high hit the coast at a hundred kilometres per hour, flooding dozens of communities and washing entire houses out to sea. The most destructive earthquakerelated event in Newfoundland's history, the disaster killed twenty-eight people and left hundreds more homeless or destitute. It took days for the outside world to find out about the death and damage caused by the tsunami, which forever changed the lives of the inhabitants of the fishing outports along the Burin Peninsula.	384
	Scotiabank Giller Prize—winning writer Linden MacIntyre was born near St. Lawrence, Newfoundland, one of the villages virtually destroyed by the tsunami. By the time of his birth, the cod-fishing industry lay in ruins and the village had become a mining town. MacIntyre's father, lured from Cape Breton to Newfoundland by a steady salary, worked in St. Lawrence in an underground mine that was later found to be radioactive. Hundreds of miners would die; hundreds more would struggle through shortened lives profoundly compromised by lung diseases ranging from silicosis and bronchitis to cancer. As MacIntyre says, though the tsunami killed twenty-eight people in 1929, it would claim hundreds if not thousands more in the decades to follow. And by the time the village returned to its roots and set up as a cod fishery once again, the stocks in the Grand Banks had plummeted and St. Lawrence found itself once again on the brink of disaster.	
Not the End of the World: How We Can be the First Generation to Build a Sustainable Planet Hannah Ritchie 3 copies plus e-book in LPL	It's become common to tell kids that they're going to die from climate change. We are constantly bombarded by doomsday headlines that tell us the soil won't be able to support crops, fish will vanish from our oceans, and that we should reconsider having children. But in this bold, radically hopeful book, data scientist Hannah Ritchie argues that if we zoom out, a very different picture emerges. In fact, the data shows we've made so much progress on these problems that we could be on track to achieve true sustainability for the first time in human history. Did you know that: Carbon emissions per capita are actually down Deforestation peaked back in the 1980s The air we breathe now is vastly improved from centuries ago	352

	Packed with the latest research, practical guidance, and enlightening graphics, this book will make you rethink almost everything you've been told about the environment. <i>Not the End of the World</i> will give you the tools to understand our current crisis and make lifestyle changes that actually have an impact. Hannah cuts through the noise by outlining what works, what doesn't, and what we urgently need to focus on so we can leave a sustainable planet for future generations.	
	These problems are big. But they <i>are</i> solvable. We are not doomed. We can build a better future for everyone. Let's turn that opportunity into reality.	
Doppelganger: A Trip into the Mirror World Naomi Klein 17 copies in LPL	Not long ago, Naomi Klein had just such an experience—she was confronted with a doppelganger whose views she found abhorrent but whose name and public persona were similar enough to her own that many people confused her for the other. For a vertiginous moment, she lost her bearings. And then she got interested, in a reality that seems to be warping and doubling like a digital hall of mirrors. It's happening in our politics as New Age wellness entrepreneurs turned anti-vaxxers find common cause with fire-breathing far right propagandists (all in the name of protecting "the children"). It's happening in our culture as Al gobbles up music, paintings, fiction and everything in between and spits out imitations that threaten to overtake the originals. And it's happening to many of us as individuals as we create digital doubles of ourselves, filtered and curated just so for all the other duplicates to see. An award-winning journalist, bestselling author, public intellectual and activist, Naomi Klein writes books that orient us in our time. She has offered essential accounts of what branding, austerity, and climate profiteering have done to our societies and souls. Now, as liberal democracies teeter on the edge, Klein takes aim at absurdist authoritarianism, using a keen sense of the ridiculous to face the doubles that haunt us. Part tragicomic memoir, part chilling reportage and cobweb-clearing analysis, <i>Doppelganger</i> invites readers on a wild ride, smashing through the mirror world, charting a path beyond despair towards true solidarity.	416
